PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience building scalable enterprise applications using React.js, TypeScript, Python, FastAPI, Node.js, and PostgreSQL. Currently working at Deloitte on ATHENA.AI, an AI-powered Model Risk Management platform, developing full-stack workflows and AI-assisted capabilities for model validation, governance, document intelligence, and risk assessment. Experienced in REST API development, RAG-based AI workflows, enterprise application architecture, RBAC, Docker, Azure, and CI/CD, with a strong focus on secure, governed, and production-ready solutions.

CORE COMPETENCIES

– React.js & Next.js	– FastAPI / Python	– AI / GenAI & LLMs	– TypeScript / JavaScript
– PostgreSQL & MongoDB	– RAG & Document Intelligence	– REST API Design	– Azure & Azure DevOps
– Docker & CI/CD	– Redux / Zustand	– Jest & Vitest Testing	– MUI / React Flow

PROFESSIONAL EXPERIENCE

Software Engineer — Full Stack – Deloitte India

June 2026 – Present

Bangalore, India

- Developing **enterprise-grade full-stack applications for ATHENA.AI**, an AI-powered Model Risk Management (MRM) platform for financial services.
- Building scalable and reusable **React.js + TypeScript** frontend components and user workflows for model validation, QA assessment, governance, document management, and reporting.
- Developing **Python/FastAPI REST APIs** and backend services supporting model-risk workflows, checklist management, document processing, and AI-assisted assessment capabilities.
- Working with **PostgreSQL** for application data, schema design, data modelling, and efficient backend data access.
- Contributing to the **QA Checklist Agent**, a central AI orchestration capability that retrieves model documentation, processes assessment context, and supports AI-assisted checklist population.
- Implementing **AI/RAG-based document intelligence** workflows involving document retrieval, semantic search, contextual information, and grounded AI-generated recommendations.
- Integrating AI capabilities with configurable **prompt templates and prompt-management controls** to support module-specific assessment requirements.
- Developing enterprise workflows for **analyst assessment, validator review, approval routing, and governance**, maintaining human-in-the-loop controls for AI-generated recommendations.
- Implementing enterprise security and governance requirements including **RBAC, authentication/authorization, audit logging, data/metadata validation, source validation, prompt-injection protection, and grounded responses**.
- Containerizing application services using **Docker** and contributing to **Azure DevOps CI/CD pipelines** for build, test, and deployment automation.
- Collaborating with architects, business analysts, QA engineers, product owners, and model-risk stakeholders in **Agile development and architecture-review activities**.

Software Engineer — Full Stack – MathCo (The Math Company)

May 2024 – May 2026

Bangalore, India

- Architected and delivered full-stack features for NucliOS, an enterprise platform serving 200+ business users, using React.js and FastAPI microservices within a Turborepo monorepo.
- Built a reusable UI component library of 40+ components (React.js + MUI) adopted across 6 product teams, cutting new feature development time by 35%.
- Designed and implemented 25+ RESTful API endpoints that process 50,000+ daily requests with average response times under 120ms, backed by PostgreSQL and MongoDB.

- Established Azure DevOps CI/CD pipelines that reduced manual deployment effort by 60% and raised release frequency from bi-weekly to on-demand.
- Improved frontend code coverage from 48% to 82% by introducing Jest and Vitest test suites, reducing production bug rate by 40%.
- Collaborated across 3 product squads in agile sprints — conducted 100+ PR reviews, drove architectural discussions, and mentored 2 junior engineers.

Software Engineer — Frontend
PointCross Life Sciences

May 2022 – May 2024

Bangalore, India

- Developed and maintained 5+ full-stack web applications using React.js, Redux, and Node.js/Express.js, supporting clinical data workflows for 150+ pharmaceutical researchers.
- Created an internal React component library standardizing UI patterns across 4 applications, reducing per-feature UI development time by 30%.
- Implemented 30+ CRUD REST API endpoints integrated with MongoDB, handling research dataset ingestion pipelines exceeding 100,000 records.
- Designed fully responsive UIs with MUI following WCAG accessibility standards, improving user task-completion rates by 25% based on usability testing feedback.
- Delivered features consistently within sprint timelines across 12+ consecutive sprints; led technical specification writing and sprint planning contributions.

TECHNICAL SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript (ES2022+), HTML5, CSS3, Redux, Zustand, MUI, React Flow, Responsive Design, WCAG Accessibility
Backend	Python, FastAPI, Node.js, Express.js, REST API Design, OAuth2 / JWT Authentication, Authorization Middleware
AI / GenAI	RAG, LLM Integration, Semantic Search, Document Intelligence, Prompt Configuration, AI-Assisted Workflows
Databases	PostgreSQL, MongoDB, Query Optimization, Schema Design, Data Modelling
Testing	Jest, Vitest, Unit Testing, Integration Testing, Test-Driven Development (TDD), 80%+ Code Coverage
DevOps	Git, GitHub, Azure DevOps, CI/CD Pipelines, Docker, Postman, Turborepo, npm Workspaces
Cloud	Microsoft Azure, AWS (S3, EC2, CloudWatch, IAM), Infrastructure Configuration, Environment Management

KEY PROJECTS

AI Background Remover

React.js | TypeScript | Transformers.js | ONNX Runtime Web | WebGPU

- Built a fully client-side AI-powered background removal application where all image processing runs locally in the browser without uploading user data.
- Integrated **Transformers.js** with **ONNX Runtime Web** to perform AI-based image segmentation using **WebGPU** with automatic WASM fallback.
- Implemented lazy loading and browser-side caching of AI models to reduce initial load time and improve subsequent inference performance.
- Converted segmentation masks into transparent PNG images, enabling users to download processed images directly from the browser.
- Optimized application performance while preserving user privacy by eliminating server-side image processing.

Online Attendance Management System

MERN Stack · JWT Auth · RBAC

- Built a role-based attendance management system (Admin, Manager, Employee) for 500+ users, with JWT authentication and real-time dashboard analytics.
- Developed 20+ REST API endpoints for authentication, attendance tracking, and reporting; integrated MongoDB with indexed queries for sub-50ms responses.

OPEN SOURCE & TECHNICAL WRITING

- Developed and published reusable internal npm packages for frontend utilities within MathCo's private artifact registry, adopted across multiple product teams.
- Active contributor to monorepo tooling ecosystems using Turborepo and npm workspaces; documented internal architecture patterns adopted by the team.
- Author of technical articles on Medium covering React architecture, full-stack development patterns, and scalable web systems — reaching 500+ readers.

EDUCATION

Master of Computer Applications (MCA)

Indira Gandhi National Open University (IGNOU)

Expected 2026
